Reasons for high or low losses:

1. Frequent Changeover of feeders during faulty Conditions in Urban areas
2. Changeover of feeders during to Overhead to UG cable work
- 3.Input energy or sales is 0 due to cable fault or breaker problem resulting in complete shifting of load to other feeders
- 4.Inter ESCOMS sharing of feeders
5. Dedicated/Express feeders have Negative losses which may be either due to meter accuracy problems at Station and Consumer end or Rending of installations on 1st day of the month but feeder input readings are read on 31st/30th midnight of previous month.

Reasons for not audited:

1. Feeders are kept idle during the month
